

PROJECT DOCUMENTATION

Integrated Logistics & Parcel Management System

Parcel Booking | Parcel Delivery | Hub Management | Warehouse Management | Government
Tenders (Manpower & Transport)

1. Introduction

This document presents the complete project overview for an Integrated Logistics and Parcel Management System designed for organizations engaged in parcel booking, parcel delivery, hub operations, warehouse management, and government tenders related to manpower and transport services. The objective of this system is to bring all core business operations onto a single, centralized platform — improving accuracy, visibility, and operational efficiency across every stage of the logistics chain.

The system is designed to be scalable, secure, and user-friendly, catering to the needs of booking staff, delivery personnel, hub in-charges, warehouse managers, and administrative teams handling government contracts.

2. Project Scope

The system will digitize and streamline the following core business functions:

- End-to-end parcel booking with customer and consignment details
- Real-time parcel delivery tracking and status updates
- Centralized hub management for sorting, routing, and dispatch
- Warehouse inventory management with stock in/out records
- Management of government tenders related to manpower supply and transport services
- Centralized reporting and dashboard for management-level decision making

3. Project Modules

3.1 Parcel Booking Module

This module allows front-desk or online booking of parcels with complete sender and receiver details, parcel type, weight, declared value, and payment mode.

- New parcel booking with auto-generated booking/tracking ID
- Sender & receiver detail management
- Rate calculation based on weight, distance, and parcel type
- Payment status tracking (Cash / Online / To-Pay)
- Printable booking receipt and consignment note

3.2 Parcel Delivery Module

Manages the complete delivery lifecycle of a parcel from dispatch to final handover, including delivery staff assignment and proof of delivery.

- Delivery staff / rider assignment for each parcel
- Status updates: Booked → In-Transit → Out for Delivery → Delivered / Undelivered
- Proof of delivery (receiver name, remarks)
- Delivery attempt history and re-attempt scheduling
- Customer-facing parcel status tracking

3.3 Hub Management Module

Handles the operations of intermediate hubs where parcels are received, sorted, and routed further to the destination hub or delivery area.

- Hub-wise parcel inflow and outflow record
- Sorting and routing of parcels between hubs
- Hub-to-hub transfer manifest generation
- Hub-wise pending and processed parcel reports
- Staff and vehicle allocation at hub level

3.4 Warehouse Management Module

Manages storage, stock, and inventory of parcels and goods held at warehouse locations before onward dispatch.

- Stock in / stock out entry with quantity and location
- Rack / bin-wise storage mapping
- Inventory ageing and pending stock reports
- Damaged / returned goods record
- Warehouse-wise stock summary reports

3.5 Government Tender Module (Manpower & Transport)

Maintains records related to government tenders for manpower supply and transport services, along with contract and compliance tracking.

- Tender record management (department, tender number, tenure, value)
- Manpower deployment record against each tender/contract
- Vehicle / transport allocation against each tender/contract
- Contract renewal and expiry reminders
- Billing and payment status against government contracts

3.6 Admin & Reporting Module

A centralized control panel for administrators to monitor and manage all the above modules.

- Role-based user access (Admin, Hub Staff, Delivery Staff, Warehouse Staff)
- Consolidated dashboard with key business metrics
- Module-wise MIS reports and export options
- Master data management (routes, rates, hubs, warehouses, clients)

4. Future Scope & Improvements

The system is designed with future growth in mind. The following enhancements can be planned in upcoming phases based on business requirements and budget approval:

- Customer mobile application for parcel booking and live tracking
- SMS / WhatsApp / Email notifications for booking and delivery status
- GPS-based live vehicle and rider tracking
- Digital signature / OTP-based proof of delivery
- Barcode / QR code based parcel scanning at hub and warehouse
- Automated route optimization for delivery and hub transfers
- Advanced analytics and business intelligence dashboards
- Integration with online payment gateways for COD reconciliation
- Multi-branch and multi-city expansion support
- Automated tender expiry and renewal alert system

Note: The above points represent the long-term roadmap of the system. These features can be taken up in future phases as separate, additional scope of work.

5. Project Quotation

Based on the modules and scope mentioned above, the estimated cost for design, development, and delivery of the complete system is as follows:

S.No.	Module / Work Description	Amount (Rs.)
1	Requirement Analysis & Project Documentation	2,000/-
2	Parcel Booking Module	4,000/-
3	Parcel Delivery Module	4,000/-
4	Hub Management Module	3,000/-
5	Warehouse Management Module	3,000/-
6	Government Tender Module (Manpower & Transport)	3,000/-
7	Testing, Bug Fixing & Basic Support	1,000/-
	Total Amount	20,000/-

Terms & Conditions

- The above quotation covers design and development of the modules listed in Section 3 only.
- Any feature from Section 4 (Future Scope) will be quoted separately if required.
- Payment terms: 50% advance and 50% on completion of the work (or as mutually decided).
- Hosting, domain, and third-party service charges (if any) are not included in this quotation.
- Prices mentioned are exclusive of applicable taxes, unless stated otherwise.
